

Any device connecting to the SJFC network through VPN must have an updated Operating System and updated Antivirus Software. Connecting to the SJFC network with a compromised computer (i.e. virus, malware, etc.) could result in the loss of VPN access.

How to install the VPN client (**Windows**):

1. From Internet Explorer, go to: <https://vpn.sjfc.edu>
2. From the Login window, select the appropriate group
3. Enter your username and password (network credentials) and click on **Login**.
4. If prompted, click on “install ActiveX Control” on the bottom of the Internet Explorer window.

5. After installation is completed, the VPN client will appear in the system tray (bottom right corner of PC). If the pad lock  is in the “lock” position, the VPN client is connected.
6. When done using the VPN client, right-click on the icon and select “**VPN Disconnect**”.

*Note:* If the auto installer fails, you will receive a prompt to manually install the application. Enter: [vpn.sjfc.edu](https://vpn.sjfc.edu), click on **Connect** and select the appropriate **group**.
